Software Engineer – Application Security

Skills :

Programming Languages :
- PHP (Native, Laravel, Symfony)
- JavaScript / TypeScript
- Java (7–13)

Frontend :
- Angular 13-19, HTML5, CSS3,

Backend & Frameworks :
- Spring, Spring Boot
- RESTful and SOAP APIs
- Security / auth (JWT, OAuth 2.0)

Databases:
- PostgreSQL, SQL, mySQL, …

Web & Data Security :
- Data encryption & hashing
- Input validation sanitization to prevent XSS/ SQL Injection/ CSRF
- Secure API design & integration
- Knowledge of GDPR
- Compliance best practices

Version Control & Continuous Integration :
- Git, GitLab, Github (CI/CD)
- Docker
- Dependecy-track
- SonarQube

Languages :

- **English:** Fluent (C1, TOEIC; Cambridge First Certificate)
- **French:** Native
- **Italian:** Fluent

Professional Experience :

Abylsen – Project Lead / Web Developer (PHP Laravel + Angular 19)
November 2024 – 2026
- **Technical Lead**, responsible for project estimation and steering committee (COPIL) coordination.
- **Designed and led the architecture** of the cooptation platform, from conception to implementation.
- **Owned and maintained** the recruitment website and internal portfolio platform.
- **Migrated SOAP-based services to a RESTful API**, integrated with Salesforce (SaaS), enabling seamless data exchange between internal systems and CRM.
- **Implemented secure authentication and authorization mechanisms**, ensuring data integrity and compliance with company security standards.

Abylsen – Web Developer (native PHP + Angular)
July 2023 – November 2024
- **Developed and maintained** the recruitment website and internal portfolio platform.
- **Implemented security best practices** to protect sensitive user data and ensure compliance (hashing key, protect input from XSS / Injection SQL, …)

Abylsen – Web Developer (Angular 15 + Plotly)
August 2021 – September 2023
- **Developed web applications** in the electrical domain, retrieving data from an internal client backend via REST.
- Designed interactive data visualizations using Angular 15 and Plotly.
- Managed version control and collaborative development using GitLab.

ThermoFisher – Fullstack Intern (Java 8 + Angular 15)
August 2020 – February 2021
- **Developed a fullstack web application** with RESTful services.
- **Implemented a license and user management** system with authentication services and data protection using JWT.
- **Used Spring, Spring Boot, and PostgreSQL** for backend development and secure data handling.

Formations :

- **Sherbrooke University (CANADA)**

2019 - 2021
Dual degree, Master's in Electrical Engineering, with a focus on **web security (CeFTI)** and **agile development** (Java), complemented by a graduate program in management (Green Belt).

- **ISEN Toulon (FRANCE)**

2015 - 2021
Preparatory and Engineering cycles (Master's level), specialized in **Smart Energy** and **Home Automation**.
